

PROBE Solution for DIP/SDIP Package

OPENice system provides the real in-circuit emulation environment with PROBE solution for each Samsung MCU device. Using the PROBE solution, the real emulation environment is protected from external interference such as electrical noise or data loss. Also, it can realize the high speed solution since it covers full operation speed of the MCU.

The following is general description of the package solution. For more detailed information, refer to the PROBE guide for each target device.

Available Package: 10DIP, 20DIP, 24DIP, 28DIP, 30DIP, 32SDIP, 40DIP, 42SDIP, 64SDIP

SYSTEM CONFIGURATION

Pin lead Out

The same package dimension pins for the target device (MCU) are led out. It can be extended as long as the user wants by putting the same size socket onto the pins.

Height (normal): 20 mm
